

## Description and objectives

This participative workshop is designed to support participants in becoming excellent speakers. Specifically, it will assist you with:

- Effectively employing verbal and non-verbal skills for 2-directional communication
- Conveying more confidence and assurance
- Preparing for questions
- Strategies for communicating across disciplinary or cultural groups
- Designing presentations to support a clear, memorable take-away message
- Identifying a few key areas for you to improve your presentation skills

## Approach

Participants will work individually and in small groups on a variety of reflective and practical exercises designed to assist them in transferring the skills to their own presentations. Each participant will give a 5-minute presentation on her research, or an aspect of her work, which will be video-recorded. Constructive, individual feedback is a collaborative product of the group.
