

Master in Life Sciences

A cooperation between
BFH, FHNW, HES-SO, ZFH

Module	Process Chemistry and Development
Code	MLS_S01
Degree Program	Master of Science in Life Sciences (MSLS)
Cluster	Chemistry
Specialization	Chemical Development and Production
ECTS Credits	4
Workload	120 student working hours: 58 lessons contact = 43.5 h; 76.5 h self-study
Module Coordinator	<p>Name Dr. Roger Marti</p> <p>Phone +41 (0)26 429 67 03</p> <p>Email roger.marti@hefr.ch</p> <p>Address Haute école d'ingénierie et d'architecture de Fribourg, Bd de Pérolles 80, CH-1700 Fribourg</p>
Lecturers	<ul style="list-style-type: none"> • Dr. Christophe Allemann, HEIA-FR • Dr. Olimpia Mamula Steiner, HEIA-FR • Guest lecturers
Entry Requirements	Bachelor of Science in Chemistry or in a related course of study including organic courses (Bachelor level)
Learning Outcomes and Competences	<p>After completing the module students will be able within the concept of Process Chemistry to:</p> <ul style="list-style-type: none"> • understand and apply advanced organic chemistry and the concepts of green chemistry • realize a route finding and route selection • realize asymmetric syntheses and biocatalysis • plan and realize the enabling of synthesis on lab scale and perform a lab optimization (solvent/reagent selection, catalysis) • understand and apply novel synthesis technologies like micro reactor and solid phase synthesis
Module Content	<p>Process Chemistry: Synthesis Development</p> <ul style="list-style-type: none"> • Knowledge of the concepts of basic process research and implication on Process Research and Development (PRD) & production • Reaction Metrics (E-Factor, etc.) and Green Chemistry • Route finding & selections - concepts, applications & case studies • Knowledge of the concepts of route enabling and synthesis optimization: "green" choice of solvent, reagent, catalysts, etc. • Knowledge of applications & the use of catalysis in PRD

	<p>Process Chemistry: Chemical Development</p> <ul style="list-style-type: none"> • Route Enabling & Lab Optimization • Planning and execution of laboratory work • Kinetics & Mechanism evaluation in PRD • Optimization by understanding impurities • New synthesis technologies like solid phase chemistry, flow chemistry, micro wave etc. <p>Advanced Asymmetric Synthesis & Catalysis</p> <ul style="list-style-type: none"> • Knowledge of the concepts of asymmetric synthesis & applications • Applications of enzymes in organic synthesis
Teaching / Learning Methods	<ul style="list-style-type: none"> • Lectures • Individual and group exercises • Active participation in the module is requested
Assessment of Learning Outcome	<ul style="list-style-type: none"> • Written exam (closed book): 50% of the final grade • Final examination (oral): 50% of the final grade • Reassessment: oral exam
Bibliography	<ul style="list-style-type: none"> • N. G. Anderson, "Practical Process Research & Development", Academic Press 2000. • O. Repic, "Principles of Process Research and Chemical Development in the Pharmaceutical Industry, Wiley 1998. • N. Yasuda, "The Art of Process Chemistry", Wiley 2010 • R.A. Sheldon, I. Arends, U. Hanefeld, "Green Chemistry & Catalysis", Wiley 2007. <p>Documentation: http://cyberlearn.hes-so.ch (requires a login)</p>
