Master in Life Sciences

A cooperation between BFH, FHNW, HES-SO, ZFH

Module	Chemical Engineering & Process Intensification	
Code	MLS_S04	
Degree Program	Master of Science in Life Sciences (MSLS)	
Cluster	Chemistry	
Specialization	Chemical Development and Production	
ECTS Credits	4	
Workload	120 h: Contact 56 lessons = 42 h; Self-study 78 h	
Module Coordinator	Name	Dr. Thierry Chappuis
	Phone	+41 (0)26 429 67 14
	Email	thierry.chappuis@hefr.ch
	Address	Haute école d'ingénierie et d'architecture de Fribourg, Bd de Pérolles 80, CH-1700 Fribourg
Lecturers	 Dr. Christophe Allemann, HEIA-FR Dr. Thierry Ursenbacher, HEIA-FR External lecturers 	
Entry Requirements	Bachelor of Science in Chemistry or in a related field including chemical engineering, chemical reaction engineering, chemical kinetics (at Bachelor level), basic functional knowledge of mathematical software package (Matlab, GNU Octave, Python, Berkeley Madonna or Mathematica).	
Learning Outcomes and Competences	 The objectives are to study and understand the operations and engineering aspects underlying process intensification, flow chemistry and the use of microreactors. The student will be able to: List and evaluate the important strategies used to intensify chemical processes Evaluate the feasibility of a chemical reaction in an intensified unit (e.g. a microreactor) Know how to engineer a microreactor and how to implement heterogeneous catalysis in it List and evaluate the possibilities of mixing reaction and separation in a single integrated processing unit. 	
Module Content	 The module is structured as follows: Introduction about process intensification and flow chemistry Flow chemistry: examples and use cases Engineering aspects underlying microreactors design Fluidic aspects underlying microreactors design 	

	Microreactor types, classification criteria for chemical reactions and		
	 Microreactor types, classification chiena for chemical reactions and technology choices (external lecturer) 		
	Heterogeneous catalysis in microreactors		
	Integrated processes and ISPR		
	 Integrated processes and reactive extraction 		
	 Integrated processes and membrane reactors 		
	 Integrated processes and reactive distillation 		
	Process efficiency		
Teaching / Learning Methods	Lectures		
	Presentations of external lecturers from industry		
	Case studies		
	Active participation in the module is requested		
Assessment of	Final examination (written): 100 % of the final grade		
Learning Outcome	Reassessment: written exam
